Utkarsh Srivastava

Data Scientist & AI Engineer | LLMs, Agentic AI, MLOps and Scalable Data Analytics | Delivering Production-Ready AI Solutions
Hyderabad, Telangana, India

Summary

I'm a Data Scientist and AI Engineer with 5+ years of experience building and deploying AI/ML solutions across CPG and BFSI domains, along with exposure to Telematics and Pharma analytics. My work spans predictive modeling, large-scale data processing, MLOps, and Generative AI, with a focus on turning complex business problems into scalable, production-ready solutions. I enjoy bridging the gap between data science and engineering to create systems that deliver real business impact. Outside of work, I enjoy traveling, dancing, and exploring new places and cultures. I'm also an animal lover and care deeply about environmental sustainability. Some of my favorite conversations have nothing to do with data or AI. They are about people, experiences, and the world around us. Feel free to connect if you'd like to exchange ideas or discuss opportunities in AI, machine learning, and data science.

Experience

Tiger Analytics

3 years 3 months

AIML Engineer

January 2026 - Present (6 months)

Hyderabad

- Built an AI agent powered by a Retrieval-Augmented Generation (RAG) pipeline to enable natural language querying over CLV KPIs, customer demographics, and basket-level insights, improving accessibility of business insights.
- Developed a geo-spatial store opportunity model leveraging H3 indexing, consumer density, competition analysis, and ranked stores by growth potential, enabling targeted marketing activation at the store level, and improving campaign planning and resource allocation.

- Developed a real-time analytics dashboard using Streamlit for an NGO, integrating MySQL and Google Analytics data to compute and monitor RFM metrics, improving donor tracking and decision-making capabilities.

Senior Analyst - Data Science

April 2023 - December 2025 (2 years 9 months)

Hyderabad

- Architected a reusable Python-based CLV modeling framework handling end-to-end ML pipelines, enabling scalable adoption across markets; drove \$46M+ incremental revenue of high-value users in the U.S. through customer segmentation and targeted marketing, while improving retention by ~70%.
- Generated \$300K+ revenue uplift and 80% higher retention by architecting and implementing a customer engagement scoring framework using loyalty app and WhatsApp data; enabled value-based segmentation for the Mexico market.
- Delivered \$7M+ annual cost savings by developing an in-house XGBoost-based propensity model for a 300+ SKU portfolio, replacing external vendor solutions with improved predictive performance and scalability.
- Led a Databricks optimization initiative by refactoring legacy pipelines and restructuring data storage layers, reducing annual infrastructure costs by \$500K+ while significantly improving pipeline reliability and query performance.
- Collaborated on a Telematics PoC to build a high-precision vehicle crash prediction model from high-frequency sensor data; earned "Technical Excellence" recognition and played a key role in securing a strategic insurance client account.

Chenoa Information Services

Software Developer (Machine Learning)

December 2020 - February 2023 (2 years 3 months)

Mumbai

- Architected and deployed in-house API services for automated document recognition and extraction (OCR/Object Detection), achieving ~80% accuracy in structured data retrieval (PAN, Aadhaar) and reducing manual overhead by 75%.
- Engineered a scalable image-processing pipeline for 100% automated Aadhaar data masking, ensuring strict data privacy compliance while eliminating human intervention in sensitive information redaction.
- Collaborated on building an internal analytics application leveraging a custom Named Entity Recognition (NER) model to enable natural language querying of credit reports, improving insight accessibility for business and leadership teams.

- Optimized data workflows by developing and maintaining SQL-based ETL processes, ensuring data accuracy, integrity, and performance through regular audits and query optimization.
- Reduced testing cycle time by ~85% by implementing Selenium-based automation for the personal loan web application and CRM systems, improving release efficiency and reliability.

Technocolabs

Deep Learning Application Developer Intern

October 2020 - November 2020 (2 months)

- Created a feature for a conversational bot that can detect human emotions and provide appropriate responses to the users.
- Annotated image data of the three major fungal diseases of Arabica coffee (CLR, CBD, CWD) to automatically identify them by leveraging the use of deep learning, object detection, and image classification.

Fouses

Machine Learning Intern and Instructor

August 2020 - November 2020 (4 months)

- Took sessions on Python and Machine learning for 3 batches of 25+ students.
- Allotting and evaluating weekly assignments of students.
- Gathered and analyzed Covid-19 dataset and built a time series forecasting model.

Education

Northwestern University

Master of Science - MS, Data Science · (June 2022 - March 2024)

PES Institute of Technology & Management, Shivamogga

Bachelor of Engineering - BE, Computer Science · (August 2013 - June 2017)
